

For Models BR, Mini-B, MB and MS

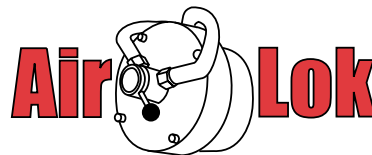

Save Time, Increase Production

The AirLok is a time saving pneumatic lock actuating accessory. Ideal for condenser tubes and other large volume, small tube work, one finger activates the powerful air cylinder which expands the wedge locks and fastens the tool securely. Release is equally simple and effortless.

The AirLok is available on the models Mini-B, BR, MB and MS beveling tools. It can be used with a wide variety of standard and custom tooling to perform many types of end preparation projects.

This AirLok option can be added to your rental or purchased tool. The tools can be converted in the field from the conventional wrench lock version. It is easily converted back to the conventional feed method by unscrewing the cylinder and attaching the wrench/nut assembly.

A compact AirLok is available for the Mini-B for applications where space is limited.

The conversion kit includes the following pieces for field conversion. Available for purchase or rental.

- **Air Cylinder**
- **Control Valve**
- **Air Lines and Fittings**
- **Modified Draw Rod, if Necessary**

Wedge sets are required to provide secure locking.
